

EM 609: Professional Project Management

Course Syllabus

Pre-Req Pre Req: EM509

Course Description This course covers the advanced project management topics necessary for implementation of and excellence in project management. Taught through case studies of best practices in project risk management, project portfolio management, project office, project management multinational cultures, and more. Also includes the main components of the Project Management Institute (PMI) Body of Knowledge to help students prepare for Certified Associate in Project Management (CAPM) or Project Management Professional (PMP) certification examination

Course Objectives At the end of this course students will be able to

1. Define Advance Project Management
2. Explain project maturity and excellence; and methods of achieving them
3. Use project management methodologies to drive companies towards project maturities
4. Explain the role of various players, employees and managements, in defining, developing and executing strategic planning
5. Describe the difference between project management and project portfolio management
6. Describe the concept of a project office (PO) or project management office (PMO) for the success of an organization
7. Describe six components of hexagon of excellence in PM to enable companies excel in project management and beat their competitors
8. Research on the effect of social and cultural aspect of organization on the success of projects
9. Describe the importance of management support in the creation and maintenance of project management cultures in organizations
10. Explain project failures related to behavioral shortcomings—poor employee morale, negative human relations, low productivity, and lack of commitment.
11. Prepare a research report to generalize and summarize new research conducted in Project Management areas covered in this class.

About this Course Exams:

This is course serves two objectives. Being a Project Management course for Professional it is targeted towards teaching advanced topics in project management along with supporting students in gaining PMP or CAPM certifications. The **chapter exam** tests the application of the fundamental and core Advanced Project Management (APM), concepts that you learned from the APM text book. We also provide **practice exams for PMP and CAPM certification**. For students who are already certified they can use this course to fulfill their continuing certification requirements (CCR). In order to satisfy the CCR program and maintain an active certification status, you must accrue and report a minimum of 60 Professional

Development Units (PDUs) during each three-year certification/CCR cycle.

The course will be taught using case studies to understand the importance of various advanced project management tools and techniques. You will be discussing various aspects by writing report/paper on new project techniques. To prepare students for PMP or CAPM, various practice exams are provided. There will be several questions in them that you may not have read in the material provided in this course. This should be taken as an opportunity to fill the gap from other resources.

Discussions:

There are two types of Discussion threads in this course. One that relate to chapter discussion that deals with concepts that are covered in them and second type of discussion threads relate to case studies that will help us to understand PM concepts in application format. The first type of discussion questions are directly extracted from the text book. Although there are several discussion questions at the end of chapter I have selected only one that I think can help us exploring more about the chapter content. However, I understand that one question is not enough so in some Chapter discussion thread you are given an opportunity to start a new thread related to a discussion question that you would like to explore. The second type of discussion thread relates to case studies present at the end of the book. Before attempting to answer these questions I will advice you all to review Case Analysis document present under Course Home and Document Sharing.

Review Research Paper

Next each one of you will be writing a review on a research paper. In this assignment you will be ask to review literature related to the concepts that are covered in the text book. The literature should be selected from project management research journals that are published after 2000 and write a review on it. A review template will be provided in document sharing.

Research Paper

Using the outcome of your research review and the gap that you have found in your review you will writing a research paper. You dont have to get approval from the instructor on the title/ topic of your research paper however, you need to show a direct connection to your research paper reviews outcomes. The template for research paper is posted under DocSharing.

Course Outline and Schedule

Schedule.

Unit 1.

APM Kerzner's Chapter#1

APM Kerzner's Chapter#1 Discussion

APM Kerzner's Chapter#1 Exam

Case Study Discussion
Certificate Exam Selection
PMP Book Chapter#1
CAPM Book Chapter#1
Pre Course Exam

Unit 2.

APM Kerzner's Chapter# 2, 3, 4
APM Kerzner's Chapter Discussion
APM Kerzner's Chapter Exam
Case Study Discussion
PMP Book Chapter# 2, 3 Exam
CAPM Book Chapter#2, 3 Exam
Selection of "Research Paper for Review"

Unit 3.

APM Kerzner's Chapter# 5, 6, 7
APM Kerzner's Chapter Discussion
APM Kerzner's Chapter Exam
Case Study Discussion
PMP Book Chapter# 4, 5 Exam
CAPM Book Chapter#4, 5 Exam

Unit 4.

APM Kerzner's Chapter# 8, 9, 10
APM Kerzner's Chapter Discussion
APM Kerzner's Chapter Exam
Case Study Discussion
PMP Book Chapter# 6, 7 Exam
CAPM Book Chapter#6, 7 Exam
Research Paper Review due with Unit#4

Unit 5.

APM Kerzner's Chapter# 11, 12
APM Kerzner's Chapter Discussion
APM Kerzner's Chapter Exam
Case Study Discussion
PMP Book Chapter# 8,9 Exam
CAPM Book Chapter#8, 9 Exam
Research Paper due with Unit#8

Unit 6.

APM Kerzner's Chapter# 13, 14
APM Kerzner's Chapter Discussion
APM Kerzner's Chapter Exam
Case Study Discussion
PMP Book Chapter# 10, 11 Exam
CAPM Book Chapter#10, 11 Exam

Unit 7.

APM Kerzner's Chapter# 15, 16
APM Kerzner's Chapter Discussion
APM Kerzner's Chapter Exam
Case Study Discussion
PMP Book Chapter# 12, 13 Exam
CAPM Book Chapter#12 Exam

Unit 8.

APM Kerzner's Final Exam
Final PMP Exam
Final CAPM Exam
Research Paper due with Unit#8

General Policies

A. Problems.

Students should discuss problems or mis-understandings about their course work directly with the instructor via telephone or email, not via broadcast emails to the entire class.

B. Online Participation and Conduct.

Since there are no required face-to-face meetings for online courses, interaction via threaded discussions is often very important for effective learning. As such, good class participation is essential and will account for a significant part of your grade. Plan to contribute to every discussion topic with a "quality" contribution -- i.e., a response that expresses clear thinking and that is relevant to the discussion. This usually involves more than just "I agree."

Our instructors and the University can not and will not be responsible for the content of any personal messages that are sent from one student to other students via email or threaded discussion. To maintain privacy, it is best NOT to share phone numbers or addresses to class mates unless necessary for team communications. It is expected that all students will adhere to accepted codes of ethical, personal, and civil conduct when conversing online, using email, or engaging in any real time online chat sessions. Failure to abide by such codes of conduct and etiquette may

result in withdrawal from the course and a failing grade.

When you send emails related to a class, you should put informational codes in the subject line of your email messages. For example, include the: **initials of your full name, course number**, and the **subject of the message** (such as the name of an assignment that you may be asking about); such as, Subject: **XYZ609Homework1**. Also, do not forget to include your full name in the text of your email message.

C. Grammar, Spelling, Writing Style, and Format.

Good grammar, spelling, writing style, and APA format is required for formal papers, per School of Engineering Technology (SET) policy. Students should follow APA (American Psychological Association) technical writing style and format guidelines for papers submitted in all SET classes. Some professors will emphasize use of APA guidelines more than others. It is recommended that you get a copy of the 5th edition of the APA Publication Manual as soon as possible, as you will use it throughout your degree. Unless otherwise specified by your professor, you should write your papers in final manuscript format (see Chapter 6, APA manual), NOT copy manuscript format (which is used when submitting articles to journal editors for pre-publication review and editing. You should especially be familiar with traditional and electronic referencing guidelines for quoting, paraphrasing, and referencing information that you use, to help avoid Academic Dishonesty problems, as mentioned above.

See <http://www.apa.org/journals/acorner.html#pubmanual> for more specific information and examples.

You should consider all of your communications with the class and professor as a professional communication. Good grammar and spelling is important for a professional in the business world. If that is difficult for you, we suggest that you compose threaded discussion responses or email messages in a word processing program where you can check spelling and grammar, and revise your writing. Then you can cut and paste the work into the threaded discussion or email message.

D. Academic Dishonesty.

The policy of the School of Engineering Technology is that any student found to have engaged in any activity constituting academic dishonesty will receive an "E" for the course in which the activity occurred. This policy relates to all forms of work associated with the course requirements (tests, lab work, papers and other assignments). Academic dishonesty includes: cheating on quizzes and exams, copying, or taking credit for another's work, plagiarism, etc. Graduate students enrolled at EMU should be aware of academic dishonesty policies and consequences, and examples of what constitutes academic dishonesty, from EMU Academic Affairs, EMU Student Judicial Services, EMU Graduate School, and the School of Engineering Technology.

Our managerial approach regarding minor occurrences of academic dishonesty in this course is to inform the involved student(s) about the problem, give a warning to the student(s) of the possible consequences, and share an example of the problem with the rest of the class, as a

learning experience for the whole class. The **consequences may be more severe** (such as failure of the assignment or the entire course), and without a warning, for major occurrences and/or second minor occurrences of academic dishonesty that occur in this course, or that are on record for other courses that you may have taken. Case records of academic dishonesty are kept in the SET department and/pr the Student Judicial Services office.

I will be using TurnItIn.com to check papers for originality.

E. Incomplete Final Grades (I): will be given only in accordance with EMU's guidelines, which are stated in the 2005-2007 Graduate Catalog (p.19), at <http://www.emich.edu/public/catalogs/2005-2007/grad/20051gfront.pdf>, as follows: I (Incomplete) Grades - An I grade may be awarded when illness or other unavoidable extenuating circumstances prevent completion of a course, provided that academic performance for the completed portion of the course (50% or more) merits a grade of B or better.

F. Student and Exchange Visitor Information Service (SEVIS).

For students who hold an F or J visa, to avoid being out-of-status, it is your responsibility to report within 10 days to the Office of International Students (OIS), 244 Student Center, any change in name, current address of residence, academic status (full or part-time enrollment), date of program completion, program/major change, level change (undergraduate to graduate), change in funding source (employment or graduate assistant position), probation or disciplinary action leading to suspension due to conviction of a crime. Effective January 1, 2003, EMU has 21 days from the date of the reported event to inform the U. S. Government -- Department of Homeland Security, Bureau of Border and Transportation Security and the Bureau of Citizenship and Immigration Services -- SEVIS database (functions of the formerly known as Immigration and Naturalization Service are a part of two new offices effective March 1, 2003). OIS enters the data into a real-time database and new documents or I-20s are then issued to you. Remember that dropping or withdrawing from course(s) may put you below full-time enrollment. Before a drop/withdrawal change is made that reduces enrollment below full-time status, you must receive permission from the OIS. If you plan to transfer to another university, this process must begin before the end of your last semester at EMU, contact the Office of International Students. Noncompliance could result in actions leading up to a fine, arrest, or deportation per the U.S. Government.

Per SEVIS regulations, International students who hold an F or J visa can only take one fully online class (no face-to-face meetings) a semester. Hybrid classes have face-to-face meetings, so are allowed.

G. Observance of Religious Holidays.

Eastern Michigan University recognizes the right of students to observe religious holidays without penalty to the student. We have students from a wide variety of cultures and countries in our EM program. We will follow a functional policy for this class that can accommodate everyone's desire to observe a religious holiday. Students in EM 695 do not have to do class

work on their religious holiday, but deadline dates for assignments will not be extended. If a student's religious holiday occurs on the last day of a unit, the student should not wait until the last day of the unit to complete their assignments. Per course policy, late assignments will not be accepted. Students are encouraged to not wait until the last minute to submit assignments.

H. Personal Involvement and Time.

Students often have the misconception that taking a course online is easier since they don't have to physically go to a classroom. When taking an online course there are some things that become easier for students. For example, it becomes easier NOT to go to class. It also becomes easier to get behind. This medium gives students flexibility in attending class--but remember, while taking a course online may be more convenient, it is not necessarily easier!

Be aware of the general guidelines to professors for student work loads: 45 hours of work per credit hour per semester. This is a 3 credit class, so we expect, on average, that students will spend 135 hours of total work time in this course. Students with more graduate-level and online learning experience tend to be more efficient and require less time--some students will require a great deal more time to get their school work completed. Be prepared for the work involved, as it may require 10-15 (or more) hours of your time each week.

I. Unit Exams

One objective of EM519 is to prepare you for PMP or CAPM exam. In this class you will be doing exams related to various PMI BoK knowledge areas. The purpose is to help you to identify your strength and weakness in BoK knowledge areas using Units' Exams. These Unit Exams tries to cover knowledge areas in details (as BoK only identifies basic or "high level" knowledge areas), thus even the presentations in the assignments are sometime not sufficient, that's why you will see that in some units students will be asked to read other articles and chapters from other books.

Unit Exams are sometime very difficult. We might not be covering some "knowledge area" and you find some of those questions in the exams and quizzes. In the same time there will be some instances where you have read an article in detail during the lecture period and the exam will not cover that area at all, or the question is from a knowledge area that is not covered yet or was already covered. These incidents are common and help us mimic the exam while it helps you to understand the very nature of a certification exam. So please use this class as a way to find out your strength and weakness in various areas and use it to do targeted studies later before appearing in the certification exam. It is because of these reasons that all unit exams are curved on 80% scale (your score of 80% or up will be treated as 100% and like wise).

This is an Engineering Management course, part of the EM program, taken by EM masters and doctoral students. Engineering Managers are responsible for planning, organizing, staffing, leading, and controlling engineering projects and personnel. They must lead by example, and make sure that objectives are met and completed on time. Poor planning and procrastination, such as trying to complete all work at the last minute, leads to poor quality and missed deadlines because there is no buffer available to deal with unexpected problems. Many of our EM students lead very busy professional lives and have significant work and family responsibilities in addition to going to school--yet they do their school work well, and get it done on time (often early). If a student in our program can not organize themselves well enough to get their school work done on time, then they will certainly have a problem organizing and leading other engineers and engineering projects, and probably should not be in this program. As such, we will give little leeway when it comes to assignments that are not submitted on time--and will suggest to chronically late students that they seek a different degree and profession.

**Course Policies,
and Guidelines**

A. Access to Course.

Our course consists of 8 units, which are scheduled from Mondays through Sundays. Most units will be scheduled across two full weeks. **All assignments will be due at the end of each unit on Sunday nights, by 11:59 PM ET, except for selection of presentation topics in Unit 1 (due earlier), and the submission of formal papers, which must be submitted by the Sunday night that is one week prior to the opening of unit of that presentation to the class. No assignments required to be completed for a unit will be accepted after the close of that unit.** All completed units will remain open for review, until the end of the semester.

B. Email to Instructor.

For EM 609 course-related submissions and communications, please send all email directly to your instructor. Also, in the subject line of your email messages, include the: **initials of your full name**, **course number**, and the **subject of the message** (such as the name of an assignment that is attached to your email); for example, Subject: **XYZ609Conflict**.

I can not be on call for your class 24 hours a day, but will be checking in as often as possible. I expect to check EM 695-related email before 12 noon on several days during the week. Due the amount of email I will receive from students, as well as other work and travel commitments, I may not be able to respond to emails or confirm receipt of submitted assignments more than once or twice a week--although I will try to do so more frequently. So, plan accordingly. If you wait until the last minute to do an assignment, and then email a request for assistance with a problem, neither I nor a fellow student may be able to respond quickly enough to help you. Also, it may take a day or two before you receive an emailed confirmation from me that I received your submitted assignment. Typically, the confirmation

will read: "Got it,"

The general format of this class will be through online guidance from the professor and students' submission of assignments, which include: reading presentation assignments and quizzes, case study discussions, peer evaluations of fellow students' work, engineering ethics project work, a leadership personality profile assessment and report, preparing for and taking the EMCI EM Certification exam, and taking a final exam.

D. Assignment Software, Submission to Drop Box, and File Names.

There are so many different word processing programs that reading assignments can become a problem in online courses if there is no standard policy set for them. **It is preferred that you submit papers in MS Word file format.** Formats that are compatible with MS Word include earlier Word versions, Microsoft Works, Word Perfect 5 or 6, and Rich Text Format. If necessary, you can compose the work in your non-compatible word processor and simply cut and paste it into an email message--although this may cause a problem if formatting is important. If using MS Project software, please submit your work in MS Project 2007 format. You may also send single or multiple files in .zip compressed format.

Submit assignments to the Unit Drop Box as directed for each Unit. The file names used for assignments should follow a coding format similar to that used for course-related emails. For example, include the: initials of your full name, course number, and the name of the assignment with its file type; therefore, the file name of an assignment would look like: XYZ609Presentation1.doc.

I will use TurnItIn.com to check papers for originality after they are submitted to the drop box.

E. Assignment Delivery and Technical Problems.

Since you will have more than two weeks and three weekends available for completing your work throughout most of the course, we expect you to get it done on time. **No assignments will be accepted after the close of a unit.** However, late work can only be expected under special circumstances. Instructor need to be notified if such circumstances arrive. In such cases every 1 week late work will be penalized by 20%, 2 week late work will penalized by 40%. No assignment in such cases will be accepted after two weeks.. Written paper assignments are to be submitted using the Unit Assignment Drop Box, and are due one week prior to the close of a unit (see schedule in syllabus). Written paper assignments will not be accepted after the close of a unit. Other work such as threaded discussions, quizzes, and exams are submitted using those course tools, which automatically close at the end of a unit. The final exam (and any other assignments due in our Unit 8 final week) will not be accepted late. We will provide early access to units for you. Plan on getting your work done during the first half of the unit, and plan on encountering unexpected problems. **You have been made aware of the consequences of poor planning, procrastination, and not getting your work done on time.**

We encourage you to make hard copies of your assignments and communications with your instructors. Computer crashes and disasters can happen--we expect you to practice good risk management

behavior, just like good engineering managers. We do not view ISP problems as an excuse for turning work in late. Alternative methods of submitting assignments include:

1. Fax it to Dr. Sohail at 734.487.8755 734.487.8755 (EMU).
2. Overnight express hard copy and on disk.
3. Make arrangements over the phone with me.

Note: It is your responsibility to access the course on another computer in the event of hardware or software problems. This can be done with a friend's computer, or one at Kinko's or the Public Library. Our guidance from the university is to not consider any excuse for missing assignments due to technical difficulties as legitimate.

F. Quizzes and Exams.

Most of the quizzes and exams in this course are timed, based on an easy standard of 120 seconds (two minutes) per question. The typical standard for professional-level exams, such as certification or licensure exams, is about 60 to 90 seconds per question. What makes it even easier for you, is that your quizzes and exams in our course are very focused on specific information from sections of specific books--whereas certification and licensure exams cover a very wide body of professional knowledge, covered by numerous books and other material.

Like some professional exams, your quizzes and exams in this class are open-book (of course)--and, like those professional exams (and regular classroom exams), you should prepare for taking your quizzes and exams in advance, by reading the material to be covered, taking notes, and applying other test-preparation studying techniques.

Evaluation and Grading

Course grades will be determined by the percentage of total points attained for various work assignments completed throughout the semester, based upon the following scale:

100 to 93% = A
92.99 to 90% = A-
89.99 to 87% = B+
86.99 to 83% = B
82.99 to 80% = B-
79.99 to 77% = C+
76.99 to 73% = C
72.99 to 70% = C-
(no D grades, based on Grad School requirements)
69.99 and below = E

Weighted percentages for various assignments

Chapter Exam	0%
Chapter Discussion	20%
Case Discussion	25%
Review Paper	15%

Research Paper	15%
PMI Exam	25%

Final course grades will be based primarily (*but not necessarily only*) on the quantitative scale shown above--but are subject to adjustment based on the judgment of your professor in consideration of qualitative factors, including academic dishonesty and displays of other unethical, unprofessional, or uncivil behaviors that are unbecoming of a good engineering manager and graduate student. (*You must to be prepared for the reality of professional life in business and industry--there is usually more to getting a good performance evaluation from your boss and peers than just production of work, other factors include: (a) personal professional skills, (b) professional communication skills, and (c) ethics and emotional intelligence.*) (a) (b) and (c) above are of vital importance to becoming successful as an Engineering Manager, and why they are three of our EM Program Student Learning Objectives. We expect to see them demonstrated by students in our classes.
